

Install the cartridge and keep the red sign of the threaded rod (B) in line with the one on the flange. This does not have to point upwards, it can also be on the side or pointing down BUT both red marks have to be on the same line. According to the mixer model, place the stop ring (1) as shown in the images below. Check the temperature with a thermometer. If the temperature is not at 38°C, use the handle to rotate the broached rod and reach the temperature of 38°C (check the temperature with a thermometer). **Turn clockwise for cold or anti-clockwise for hot water.**
